

## Home Science Club.

Home Science is an area of study that equips learners with knowledge and skills to manage home and family life effectively. It is both a science and an art that improves the quality of everyday living.

It covers most of the following, Food and Nutrition – meal planning, cooking, and healthy living, sewing, knitting, crocheting, and fabric care, Home Management like cleanliness and personal hygiene, as well as interior Decoration.

In our Home Science Club, we decided to choose Crochet as our main area of focus. Crochet is a creative and practical art of making fabric using yarn and a crochet hook. This is a club where creativity meets

fashion.

Through crochet, our club members not only explore their creativity but also gain valuable life skills. We can create items for personal use, school activities, or even for sale and generate an income. This makes crochet an empowering skill that blends learning with fun, while also building responsibility and teamwork.

In conclusion, crochet is more than just a hobby it is a life skill. Within Home science, it represents the connection between creativity, practicality, and empowerment. By focusing on crochet, our club is nurturing skills that can last a lifetime and even open doors for future opportunities.

Therefore, we would love to invite everyone to join our club for for a fun and creative experience. We can't wait to

*see what you create!*
